The attached spreadsheet lists products that either are certified as being IPv6 certified by the Joint Interoperability Test Command (JITC) or are waiting for its certification testing. If the product is not listed, the original equipment manufacturer has not submitted it for testing. Included are network appliance and router.

Each worksheet identifies an equipment model, if it is listed on JITC's approved product list, and whether the products complies with the specific standards defined in "DoD IPv6 Standard Profiles For IPv6 Capable Products Version 4.0."
